ShadowProtect Backup
"*The world-leading real-time backup and recovery solution*"

ShadowProtect is industry-leading backup and recovery software trusted by administrators of millions of machines worldwide and is licensed by many well-known backup and disaster recovery suppliers so is well tested, supported and reliable.

Companies are infected with viruses, spyware, malware, and phishing attacks constantly. Some were able to get back on track and continued in operation while sadly for others, they did not. The statistics attest to the fact that one of the biggest challenges small businesses face is how to avoid business disruption following a computer/server failure. Numerous industry studies have shown that the need to back up critical files and programs is common knowledge but not common practice. Having a reliable backup solution is one important aspect for business continuity.

ShadowProtect is automated backup software that works quietly in the background. In the event of data loss or complete hardware disaster, its flexible recovery options allow you to completely recover files or perform a full system recovery in a matter of minutes. This can save you hours or days of IT consultant time when you need to recover your desktop or server.

With ShadowProtect you will have peace of mind knowing your data is completely protected and available in times of need.

ShadowProtect Benefits:

- Designed specifically for Windows operating systems and servers
- Backup everything including files and folders, applications, configuration settings, services, systems.
- Securely encrypts your backup to prevent unauthorised access to your sensitive data
- Set it up once and forget about it: ShadowProtect continuously makes full or incremental backups every 15 minutes
- Remotely manage your backup and receive notification when backup is successful or failed
- Fully restore systems and data to a chosen past point-in-time after disaster strikes
- Easily recover from your original computer to a new replacement computer or a virtual environment using recovery CD or remote access
- Seamlessly restore a single file, directory, or an entire disk to a hard disk or to a virtual machine
- Back up to a variety of onsite or offsite devices from an external USB drive to network attached hard drives
- Management Console allows you to simultaneously push installs to all of your Windows desktops and laptops (Server Edition only)
- Backups include business productivity systems such as Exchange Server, SQL Server, SharePoint Server, Microsoft CRM, etc. (Server Edition only)
